If the answer to any of the items in Section 3 is yes, explain (attach additional sheets if necessary):

(Previous Foundation Repairs) The slab itself has required no repairs, but in 2011, dual piers were installed on chimney end of house. The chimney had settled. Presumably, it was due to soil settling or the off and on multi-year droughts between 1995 and 2011. No change has been observed since the pier installation. The pier installation has a transferable warranty.

(Previous Other Structural Repairs) Some logs were replaced in the early years of ownership due to water and termite damage and lack of maintenance. Occasional log repair is required for small areas and Abatron WoodEpox is used.

The plumbing drain pipe line for the kitchen and washer was initially under the house. The line had a swag per an examination by camera. In 2013, that line was abandoned and the drainage was re-routed to the exterior from underneath the kitchen sink.

(Settling) See comments under foundation repair.

(Wood Rot) See comments under previous structural repairs. No known current wood damage that hasn't been repaired.

(Previous treatment for termites or WDI) Treated with Termidor in early 2000's and no known signs of termites since.

(Previous termite or WDI damage repaired) As I recall, the termites were associated with a water leak beneath the kitchen sink. The affected logs were replaced.

*A single blockable main drain may cause a suction entrapment hazard for an individual.
